

Steps in using cloud interface:

1. Setup a Dropbox account
2. Register separately on the <https://www.paprosinc.com/login.php> site separately.
3. Login into the paprosinc site, go to Product lifecycle-Simple interface
4. There click this link - Click here for third party cloud access
5. In that screen click this link:
Click here to view products/parts declarations from your Dropbox Supply Chain files
6. The very first time, you have to Authorize on Dropbox- Click this link that's on the middle of the page, this will open a Dropbox login screen, login and authorize **your paprosinc account to access your Dropbox files.**
7. The paprosinc site remembers this for future use, so normally this is required only once.
8. Then you can point to the folder in Dropbox and view the files in 175x format or 62474 format.
9. This will enable you to keep all your files on the cloud very economically while still being able to view them.
10. If you need more advanced scrubbing of these files for thousands of xml files, get a license from Papros for advanced services.
11. Any questions send email or use the Online Help Desk.
12. Remember basic viewing for cloud is FREE.
